GitHub: [MiladYarmohammadi](#)

Summary

Certified [Professional Cloud Architect \(GCP PCA\)](#) and DevOps Engineer with +7 years of experience across EMEA. Specialized in Kubernetes, Terraform, and multi-cloud infrastructures (AWS, GCP, Oracle Cloud, OpenStack). Proven record of reducing infrastructure costs by 70% and enabling high-velocity releases. Looking for remote opportunities to deliver optimized cloud-native solutions.

Skills

Cloud Platforms & Services: GCP, AWS, Oracle Cloud, OpenStack, Proxmox

Kubernetes Ecosystem: Kubernetes, Helm, Operators, Rook, Cilium

IaC, CI/CD, and Automation: Terraform, Terragrunt, Ansible, GitLab CI/CD

Observability & Monitoring: Prometheus, Grafana, DataDog, Elastic Cloud, KubeCost

Programming Languages: Python, Flask, Bash

DBs and General Tools: MySQL, Percona XtraDB Cluster, MongoDB, Redis, RabbitMQ

Work Experience

Senior Cloud DevOps Engineer | iToll, Tehran (Remote) | Sep 2024 - Present

- Reduced infrastructure costs by 70% by migrating from Arvan Cloud IaaS to a bare-metal Kubernetes deployment with Ceph Rook.
- Migrated from Calico CNI to Cilium, reducing iptables overhead and enabling Envoy service mesh, hitting latency and fault response SLOs sooner.
- Migrated a MySQL master-slave setup to a Percona PXC multi-master database on K8S, reducing operational expenses and enabling Online Schema Change, XtraBackup, and other Percona tools.
- Implemented Terraform modules to use on a Terragrunt (a wrapper on Terraform) project for Infrastructure-as-Code, managing S3, IaaS, and CDN services for ArvanCloud.
- Automated infrastructure deployment operations (Ansible, Terragrunt, Helm) using GitLab CI/CD, reducing overall infrastructure operations by 20%.
- Managed and maintained Proxmox-based virtualized bare-metal servers across production, staging, and DR environments, improving flexibility and reliability.

Senior Cloud DevOps Engineer | SponixTech, Doha | Aug 2022 - June 2024

- Reduced AWS and GCP annual costs by \$260k by migrating some of the production and whole disaster recovery servers to an OpenStack cluster on Oracle Cloud bare metal instances.
- Optimized CPU and GPU-intensive workloads by tuning kernel, CPU pinning, configuring CPU mitigations, base frequency and governor, lowering STDDEV and AVG latency by 30%.
- Led adoption of the 12-factor app and other containerization best practices to transition from monolith to microservice architecture, increasing weekly release velocity by 50.
- Migrated staging workloads from EKS to Oracle Cloud self-managed clusters and implemented the Blue-Green deployment strategy, improving rollback duration time by 30%.
- Simplified monitoring operations using Prometheus Operator, reduced hassle on managing targets, resulting in broader observability, and reduced issue detection time by 30%.
- Centralized GitLab CI/CD pipelines streamlined microservice build, test, and deployment, cutting repetitive operational tasks by over 50%.

Cloud DevOps Engineer | Ertebatat Novin Faranam, Tehran | Oct 2018 - Aug 2022

- Established full observability for API, dashboard, and infrastructure health by leveraging Prometheus, Grafana, and the EFK (ElasticSearch, Fluentd, Kibana) stack.
- Designed and managed a Private Cloud infrastructure with OpenStack, Kubernetes, and Ceph, supporting over 1000 VMs and over 1 PetaByte of storage.
- Implemented HAProxy with Keepalived for layer 4 load balancing, handling over 30k requests per second and over 200k active connections.
- Researched, developed, and well-documented OpenStack, Ceph (RBD, RGW, CephFS), and Kubernetes for providing services on public and private clouds.

Education

M.S. in Computer Science, Artificial Intelligence

Amirkabir University of Technology, Tehran | Sep 2017 - Feb 2020

B.S. in Applied Mathematics

Khaje Nasir Toosi University of Technology, Tehran | Sep 2012 - Sep 2017
